

## GlycoCheck Microvascular Health Assessment

Age Reversal Technology Center - Healthcare of the Future, Today!  
941-806-5511; [www.ARTC.health](http://www.ARTC.health); 3226 Clark Rd., Sarasota, Florida  
More info on GlycoCheck @ [www.ARTC.health/GlycoCheck](http://www.ARTC.health/GlycoCheck)

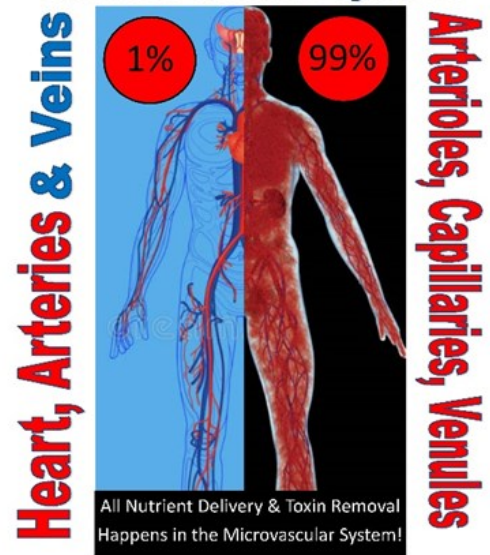

**GlycoCheck is a truly revolutionary technology that Non-Invasively, yet DIRECTLY, visualizes and assesses the body's SYSTEMIC Microvascular System (aka the Microcirculation).**

The Microcirculation / Microvascular System accounts for **99% of the surface area of the entire vascular system** but NO ONE has been able to assess it effectively until now. The Macrovascular system (arteries & veins) only accounts for **1% of the entire vascular system** but that is the only thing that doctors have been able to assess and monitor until now.

**GlycoCheck** was patented in 2009 and is being used in over 150 major research institutions around the world. Finally, it is becoming available to select Health Care facilities. ARTC is one of the first facilities in the world to receive this breakthrough technology.

### Comparison of Macro-Vascular vs. Micro-Vascular Systems

**The GlycoCheck visualizes and assesses the health of the Glycocalyx.** The Glycocalyx is a protective layer that lines the blood vessels; it consists of long chains of **polysaccharides** (specialized sugars) that combine with **protein & fats** to form gel-like Glyco-proteins & Glyco-fats. These structures **look like tiny hairs but they are not hairs**; these structures **protect the endothelial cells of the blood vessels from damage while enhancing the flow of blood through the vessels.** When they become damaged, this leads to a reduction of oxygen & nutrients getting to our cells and a buildup of toxins & various waste products. Both of these damage our cells and our mitochondria. This combination can, and often does, lead to the start & progression of virtually **ALL chronic disease processes!**

This technology was patented in 2009 and it has taken until now, 2023, for it to become available to the public. Over 150 universities and research institutions throughout the world have used it to study the microvascular system and its contribution to chronic disease. That is the kind of support, documentation, and verification that this technology has amassed over the past couple of decades.

**We are one of the initial 100 GlycoCheck clinical testing facilities in the nation. We should have our by early February (although there have been several delays so far).**

The test visualizes the microvascular system under the tongue using a special side-stream darkfield microscopic camera technology. The software performs millions of calculations and arrives at a 'Microvascular Health Score.'

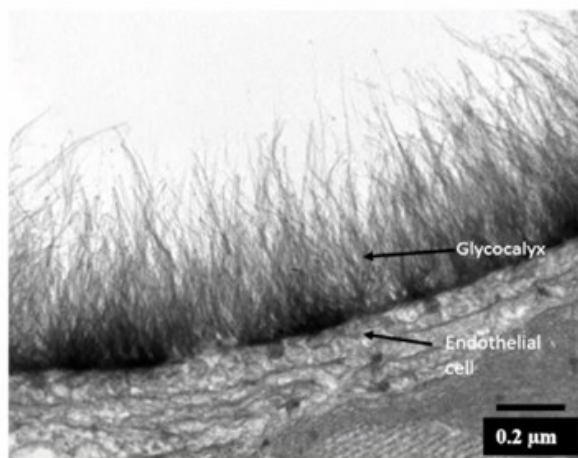

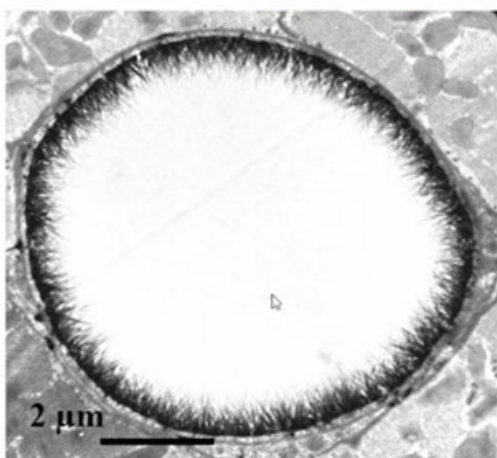

Everyone's microvascular system becomes damaged with age due to wear & tear, dietary imbalances, toxins, stress, etc. Therefore, everyone can benefit from taking steps to repair & restore their microvascular systems. That is where **Endocalyx PRO** and other nutritional support products come into play. By consuming them as recommended, the Glycocalyx begins to repair itself, thereby improving the health of your Microvascular system throughout the body!

When you understand that the **ONLY** place that nutrient delivery & exchange happens is via the Microvascular system, you will realize how **IMPORTANT** it is to restore the proper structure & functions of the microvascular system. Additionally, the vast majority of cellular waste products and removal of other toxins from the cells and tissues also happens via the microvascular system. Therefore, a healthy microvascular system is **VITAL** to both nutrient delivery and waste or toxin removal.

The real beauty & value of the GlycoCheck is that it allows you to **MONITOR** and confirm improvement in your microvascular system! It is recommended for those with low scores to retest every 3-4 months until their microvascular system has been restored to a healthier level of function. For those with good scores (middle range) and above, a retest every 6-12 months is sufficient to monitor progress while remaining on a healthy diet & exercise regimen.

Finally, a **Non-Pharmaceutical, NUTRITIONAL** intervention has been developed, researched, and proven to help restore the health of the Glycocalyx and therefore the integrity & function of the Microvascular system.

## The glycocalyx is the Teflon-lining of blood vessels

# Do you suffer from any of these conditions?

Early warning signs of a deteriorating vascular system can include:

- 
- ▲ Cold hands and feet
  - ▲ Leg cramps
  - ▲ Skin problems
  - ▲ Hair thinning
  - ▲ Fatigue
  - ▲ Lack of focus
  - ▲ Memory loss
  - ▲ Certain eye problems
  - ▲ Hearing loss
  - ▲ Severe PMS
  - ▲ Erectile dysfunction
  - ▲ High blood pressure
  - ▲ Type 2 diabetes

## If you do, Call to schedule your initial GlycoCheck test now.

**Call 941-806-5511**

Once you know your vascular health score, we can work with you to help improve it thereby enhancing nutrient and oxygen delivery to every cell in your body.

Science has finally determined\* that virtually ALL CHRONIC DISEASES begin with compromised Mitochondrial Function and the primary cause of that is damaged Microcirculation which limits nutrient & oxygen delivery to all of the cells of the body & their Mitochondria.

We offer comprehensive Regenerative Programs incorporating the

**Wolverine Healing Protocol—**

Nutra & Microcirculation Regenerative Therapy and the 4Ms Approach.
